Beginning with the early steamers of the 1900s – to the bulkers of the 1950s and self-unloaders of the 1970s – to the advanced technology of today's self-unloaders, tankers and bulkers – Algoma Central Marine has created a bridge to future growth.

Today, Algoma Central Corporation is the largest Canadian shipowner on the Great Lakes-St. Lawrence Waterway.

Learning from what has worked in the past, we combine the best methods of effective marine engineering with new procedures and technology to enhance the safety, flexibility and performance of our Great Lakes fleet.

Knowing what works best – and constantly working to improve – has made Algoma Central Marine the leader in Canadian Great Lakes marine transportation.
